

Image Processing (1)

Shin'ichi Satoh

Purpose of this course

- Improve insight for image processing (IP)
- Find proper ways to apply IP techniques to your particular problem
- learn how to read IP papers in proper viewpoints
- Points: representation, model, and process
- Reason: human sensation and physical imaging system

What are NOT covered (or NOT addressed) by the course

- Comprehensive study in IP, from fundamentals to component techniques
- Broaden horizons in recent topics in IP
- Training to use IP techniques

Configuration of the course

- 10 classes are planned
- time: negotiable
- first 1-2 classes: introduction and foundation
- rest: read good IP papers upon request taking volunteers (provide summary, guide discussion)
- credits: awarded by reports

Purpose of IP

- Visualize invisible information
- Image conversion (enhancement, restoration, etc.)
- Delineate symbolic information from images (OCR, robot vision, etc.)

Visualize invisible information

CT image

Infrared image

Image restoration and enhancement

Mars Pathfinder image (Super resolution)

Symbolic information extraction

(b)

Why image?

- Human has too good ability in image processing.
- We can get rich information from the real world from image.
- Constitution of image is mostly influenced by two aspects:
human's visual sensation system and physical system of image formulation.

Image as intensity data

Human Visual Sensation System

- Biological constitution of eyes
- Similarity to camera system
- Color sensation (discrepancies between biological sensation and physical formulation)

Recommended textbooks

- A. K. Jain, Fundamentals of Digital Image Processing, Prentice Hall, 1989.
- B. K. P. Horn, Robot Vision, MIT Press, 1986.
- A. S. Glassner, Principles of Digital Image Synthesis, Morgan Kaufmann, 1995.
- D. H. Ballard and C. M. Brown, Computer Vision, Prentice Hall, 1982.
- P. H. Lindsay and D. A. Norman, Human Information Processing: An Introduction to Psychology, Academic Press, 1977.

Recommended journals to study

- IEEE Transactions on Pattern Analysis and Machine Intelligence (TPAMI)
- IEEE Trans. on Image Processing (ToIP)
- International Journal on Computer Vision (IJCV)
- Computer Vision and Image Understanding (CVIU)
- IEEE Trans. on Multimedia (TMM)

Some papers to be read

- S. Geman and D. Geman. Stochastic relaxation, Gibbs distributions and the Bayesian restoration of images. TPAMI, 6:721--740, 1984.
- T. Gevers and A. W. M. Smeulders, PicToSeek: Combining Color and Shape Invariant Features for Image Retrieval, ToIP, 9:102-119, 2000.
- A. Srivastava, X. Liu and U. Grenander, Universal Analytical Forms for Modeling Image Probabilities, TPAMI, 24:1200-1214, 2002.
- A. Torralba and A. Oliva, Depth Estimation from Image Structure, TPAMI, 24:1226-1238, 2002.
- Y. Y. Schechner and S. K. Nayar, Generalized Mosaicing: Wide Field of View Multispectral Imaging, TPAMI, 24:1334-1348, 2002.
- Y. Caspi and M. Irani, Spatio-Temporal Alignment of Sequences, TPAMI, 24:1409-1424, 2002.
